

Reverse Logistics & Reusable Packaging

Innovative material handling solutions for a cost-effective and sustainable supply chain worldwide

EcoHandling was founded with a vision to create global sustainable logistics. We aim to transform the shipping industry by replacing the single-use wood crates commonly used today with our tailored multi-use plastic packaging.

Combined with a comprehensive reverse logistics service (pick-up, clean, repair, store, re-use) we have created a unique and innovative solution. With simplified transport of diverse equipment, from small parts to heavy machinery, Return Merchandise authorization (RMA) is easy.

EcoHandling allows environmentally conscious companies to resolve their industrial packaging and freight challenges.

- Foldable
- Modular
- Eco-friendly
- Worldwide

Move your shipping costs from an ongoing weight on your margins to a one-time investment

 > Up to **35% cost savings** and quick ROI
 > Reduced OPEX over time
 > NIMBY solutions

 > Up to **70% reduced emissions**
> Increased CSR value
 > Compliant with sustainability goals

Our clients

HP Indigo Testimonial

“The implementation of EcoHandling reusable package is a great opportunity to expand our sustainability culture.” **Mishel Yeshayahu** | Drums Commodity Manager

“This collaboration... provides out-of-the box solutions for reuse and recycle packages.”

Alon Titan | Mechanical Procurement Vendor Manager

Full versatility for sustainable development

We strive to employ sustainability best practices for significant cost savings and simplified logistics. Reduced operational cost lead to increased profit margin.
